## PROFESSIONAL SUMMARY

AI/ML Engineer with **4+ years of industry experience** spanning analytics, cloud automation, and AI systems. Experienced in designing and deploying production-grade LLM applications, multi-agent workflows, RAG systems, and AI-powered developer and recruiting tools across cloud-native environments.

## TECHNICAL SKILLS

**Programming:** Python, SQL, Bash

**LLM & Agentic Systems:** LangGraph, LangChain, MCP, RAG, OpenAI, Mistral, Hugging Face, Prompt Engineering, AI Agents, Multi-Agent Systems

**Machine Learning:** PyTorch, scikit-learn, MLflow

**Data & Retrieval:** Faiss, Vector Databases, PostgreSQL, MySQL, Pandas, NumPy

**Cloud & MLOps:** AWS, GCP, Docker, Kubernetes, FastAPI, Terraform, GitHub Actions, Jenkins, CI/CD

## EXPERIENCE

### AI/ML Engineer

Aug 2025 – Present

*Digit88 Remote, India*

- Designed and built **Recruit Assist**, an AI-powered interview platform that automates resume scoring, question generation, and turn-based voice interviews with structured scorecards; engineered a provider-abstraction layer and caching strategy enabling one-switch swaps across cloud/local LLM, STT, and TTS providers, reducing costs to approximately **\$0.003 per resume** and **\$0.12 per interview**.
- Built **NewsAI**, a LangGraph-orchestrated agentic newsletter platform with multi-provider LLM support, replacing **6 hours** of daily analyst effort with **10-minute** automated runs processing **200–300 articles in minutes**.
- Architected a **multi-agent ranking and discovery system** that improved labeled multi-class classification accuracy from **13% to 52%** and increased relevant content coverage by **60%** through multi-intent query generation, domain weighting, and de-duplication.
- Built and deployed **AutoDoc AI**, a **multi-agent codebase intelligence platform** leveraging **MCP-integrated** tools to analyze repositories for architecture, code quality, and security issues, reducing repository analysis effort by up to **70%**; designed with agent validation and extensible workflows for automated refactoring and PR generation.
- Built and deployed a secure **Hybrid RAG system** (BM25, vector search, and reranking) enabling contextual retrieval across thousands of articles with **sub-1s p95 latency**.

### Machine Learning Engineering Consultant

Apr 2025 – Jul 2025

*Vosyn Toronto, Canada*

- Designed and deployed **SmartHTML**, a multi-stage AWS Lambda pipeline orchestrated through SQS and LangGraph agents to automate PDF-to-HTML review workflows, reducing developer effort from 1-2 hours to 25 minutes per asset.
- Implemented a **PSOLA-based, silence-aware realignment** module for auto-dubbing, improving multilingual **fluency/prosody** (internal metric **+200 bps**) and stabilizing long-utterance timing.
- Containerized** the realignment service (FastAPI) and deployed on **Google Cloud Run** as a **stateless, autoscaling pipeline stage**.
- Wrapped an existing FastAPI backend with **FastMCP** to securely expose the translation pipeline to a chatbot.

### SRE and Automation Intern

May 2024 – Aug 2024

*GridX Toronto, Canada*

- Built a **Python-based Slack bot** on **AWS (Amazon Web Services) EKS**, using **AWS Lex** and **Lambda** to automate Jira ticket creation and access provisioning. Reduced DevOps ticket workload by **80%**.
- Engineered **CI/CD** (Continuous Integration/Continuous Delivery) pipelines using **Docker** for containerization and **Jenkins** for automated builds, pushing images to **AWS ECR**.
- Scheduled RDS clusters via **tag-driven Jenkins jobs**, reducing idle-hour spend by **10%**.

### Product Analyst

Sep 2020 – Dec 2022

*Playsimple Games Bengaluru, India*

- Shipped real-time product-health alerts by **instrumenting an Isolation-Forest detector** integrated with on-call workflows.
- Ran user studies + **A/B experiments**; resulting features **lifted retention 15%** and **IAP 40%**.
- Developed and maintained **data dashboards** for the leadership team, reducing data retrieval time by **20%**.
- Built an interactive investigation **Dashboard in PowerBI**, querying trillions of records and hundreds of tables in **PostgreSQL**, reducing Root Cause Analysis time by **25%**.
- Served as an **instructor** in the intern training program and managed **two interns**, overseeing their deliverables and providing technical guidance.

## EDUCATION

---

### University of Ottawa

Master of Computer Science (GPA: 4.9/5.0)

Sep 2023 – Dec 2024

Ottawa, Ontario

### SRM Institute of Science and Technology

Bachelor of Technology in Computer Science and Engineering (GPA: 9.2/10)

Jul 2017 – Jun 2021

Chennai, India

## PROJECTS

---

### Game Manual Q&A Chatbot | Python, Streamlit, LangGraph, OpenAI API, Qdrant, GitHub Actions

[Link](#)

- Pre-computed embeddings from five classic board game manuals using **OpenAI's text embeddings** and stored them in a **Qdrant** cloud vector database.
- Orchestrated a **LangGraph** flow that conditionally queries Qdrant, scrapes BoardGameGeek for errata, and issues clarification prompts.
- Published a **Streamlit** UI on Hugging Face Spaces and wired **GitHub Actions** for CI/CD.

### Phishing Detection Using the Email Body | Python, Mistral LLM, PyTorch, Prompt Engineering

[Link](#)

- Fine-tuned a **Mistral-7B-Instruct** model to classify emails as phishing vs. non-phishing, achieving **98.9%** overall accuracy and **94%** accuracy separating spam from phishing. Deployed the model as a live demo on Hugging Face Spaces.

### Phishing Detection Using URLs | Python, RoBERTa, TensorFlow, scikit-learn

[Link](#)

- Implemented a **RoBERTa-based URL classifier** (no manual feature crafting) reaching **98%** detection accuracy.
